

SOUTH POINTE BUILDING EXTERIOR PAINT COLOR INFO

The information below was captured from several documents dated May 2020.

Deck Coating:

- The documents listed two different deck coatings: SD2C4 SuperDeck Transparent Oil Natural and, SD1T00100 SuperDeck Waterbased Clear Sealer. Both are Sherman Williams products. “SD” is an abbreviation for “SuperDeck”.
- These products may no longer be available from Sherman Williams.
- The documents did not indicate where the two different products were used. It is suspected that the water-based product was used on building walkways and staircases because it dries fast and can be walked on within a few hours. Oil based sealers require 24 hours or longer to dry and were probably used on docks surfaces.

Front Doors: All-purpose low luster (or satin), water based. enamel black.

White Trim: Sherman Williams Duration satin white. The image to the right is the color data sheet that was removed from a paint can of this product. Note the label states “SOUTHPOINT TRIM”.

Siding: There was no information provided regarding the color code or formula for building exterior siding. The only information was a copy of the paint can color data sheet to the right with the words “SOUTHPOINT SIDING” on it.
